Noorullah Noori

Senior Developer

As a Senior Software Engineer with nearly **a decade of diverse experience**, my professional journey has evolved from an intern to a proficient developer and team leader, demonstrating an unwavering commitment to continuous growth.

My professional approach is defined by the application of robust software engineering practices, encompassing **SOLID principles, clean code** practices, and thoughtful **design patterns**. I possess a proven track record of successfully managing projects independently and as part of large teams, highlighting versatility and effective collaboration.

Commencing as an intern, I gained hands-on experience with the **Java Spring framework** and contributed significantly to the "TechForce" project. As the **co-founder** of an IT company, I acquired in-depth knowledge of product lifecycle management, leading the development of numerous web and desktop applications.

Transitioning through roles such as PHP Developer, Senior Developer, and Development Team Head, I spearheaded transformative projects for the *Ministry of Foreign Affairs*, achieving a remarkable **20-fold increase in document attestation capacity**, thus significantly enhancing citizen services.

In my current role, I've demonstrated a profound understanding of **PHP** and **Symfony** framework, seamlessly created and integrated **RESTful APIs**, and worked comprehensively with **Ibexa DXP**.

Throughout my career, I've engaged with a diverse array of technologies and programming languages, showcasing proficiency in Symfony versions 4 to 6, **Laravel** versions 5.7 to 7, **PHP 7/8**, **MySQL**, and Rest API development. This well-rounded skill set, coupled with an unwavering commitment to best practices, uniquely positions me to make substantial contributions to any project.

Experience

2025 - Present

OQEMA AG | Mönchengladbach, Germany

Solution Architect web and Digital Platforms

- Lead the development and maintenance of a complex project, ensuring high code quality and efficient processes.
- Conduct thorough code reviews, uphold coding standards, and drive continuous improvement.
- Oversee project coordination, deployment, setup, architecture design, and long-term maintenance.
- Work extensively with Ibexa DXP, integrating it with third-party applications to enhance functionality.
- Optimize code and processes, improving performance, scalability, and maintainability.
- Implement CI/CD pipelines to streamline development and deployment workflows.
- Enforce security standards, ensuring the reliability and protection of the software.

2022 - 2024

Endava | Berlin, Germany

Web Developer

- Spearheaded the development of new features within the Symfony framework, demonstrating a deep understanding of PHP and Symfony components.
- Successfully integrated and maintained RESTful APIs to facilitate seamless communication between diverse systems, enhancing overall project functionality.
- Played a pivotal role in the maintenance of ongoing projects, ensuring stability, security, and optimal performance.
- Embraced the challenge of working on Ibexa DXP, contributing to the platform's ecosystem and gaining valuable insights into enterprise-level digital experience solutions.
- Actively participated in **code reviews**, maintaining *code quality*, and upholding **coding standards**.

Certificate

Ibexa DXP Advance Developer Training

Ibexa - Sep 2024

Ibexa DXP Developer Training

Ibexa - Mar 2025

API Platform

Doctrine, Symfony & the Database

SymfonyCasts - Aug 2022

Publication

Security, Usability, and Accessibility analysis
of governmental websites in Afghanistan

2021 - 2022

President's Office for Policy and Strategy

Development Team Lead

- Orchestrated the design and development of our organization's website, ensuring a contemporary and user-centric online presence.
- Led the successful development of a multi-service platform, effectively digitizing paper-based applications and substantially enhancing *operational efficiency*.
- Directed the creation of a sophisticated dashboard within the platform, providing the nation's president with real-time insights into project demographics and statuses.
- Conducted comprehensive *code reviews*, mentored team members, and cultivated a culture of *continuous improvement*.
- Managed project planning and resource allocation, ensuring the punctual delivery of *high-quality projects*.

2017 - 2018

Administrative Office of the President

Web applications General manager

- Designed and developed numerous websites and their **Content Management Systems (CMS)** for diverse organisations, delivering tailor-made solutions to meet unique business requirements.
- Spearheaded the creation and development of an *Archive Management System*, resulting in substantial *cost savings for the government, amounting to approximately \$60,000*.
- Pioneered various projects focused on digitising existing paper-based processes, fostering efficiency, accuracy, and sustainability in diverse operational contexts.
- Secured a prestigious **scholarship from TU Berlin**, prompting a temporary pause in professional endeavours to pursue advanced studies.

2016-2017

Grand Technology Resources

PHP Developer

- Appointed to lead a transformative project initiated by the *Ministry of Foreign Affairs*, tasked with modernising citizen document attestation processes and replacing an inefficient paper-based system.
- Independently managed the end-to-end project lifecycle, including design, development, and deployment, achieving successful implementation within a *tight deadline*.
- Significantly increased the document attestation capacity, **processing 20 times more** documents compared to the previous paper-based system, leading to a substantial improvement in citizen service accessibility.
- Successfully addressed long-standing challenges, including document failures and delays, establishing a transparent and efficient system benefiting citizens and the organisation.

2015-2016

PeakSoft Technologies

Co-Founder & Software Developer

- Co-founded a pioneering software company with a primary focus on providing digitised solutions to replace traditional paper-based processes.
- Led a talented team in designing and developing numerous websites and their respective Content Management Systems (CMS), contributing to a robust online presence for clients.
- Successfully conceptualised, designed, and developed various applications catering to diverse needs, showcasing adaptability and a keen understanding of client requirements.

Main Projects:

- **Sarafi**: Developed a financial services application catering to individuals and businesses involved in currency exchange and other financial transactions, including remittances.
- **Hostel Management System**
- **University Management System**
- **ERP System for Construction Company**
